The algebra techniques that you will use in ch 6 include
partial fractions,
completing the square,
adding 0, and
multiplying by 1.

1. Look at denominator

i.) Can you factor denominator over the reals? If so, factor and use partial fractions.

ii.) Does your denominator equal one of the following? s^n , $s - a$, $s^2 \pm a^2$, If so, use the appropriate formula.

iii.) Do you need to complete the square? Example:

$$\begin{aligned}10s^2 + 60s + 91 &= 10(s^2 + 6s) + 91 \\ &= 10(s^2 + 6 + 9 - 9) + 91 \\ &= 10(s^2 + 6 + 9) - 90 + 91 \\ &= 10(s + 3)^2 + 1\end{aligned}$$

2. Look at the numerator

i.) Do you need $s - a$? Try adding 0. For example to make $s + \frac{3}{2}$ appear in $5s + 21$:

$$5s + 21 = 5\left(s + \frac{3}{2}\right) - \frac{15}{2} + 21 = 5\left(s + \frac{3}{2}\right) + \frac{27}{2}$$

ii) Do you need b ? Try multiplying by 1. For example, if you need $\sqrt{\frac{7}{4}}$, but you have $\frac{27}{2}$: $\frac{27}{2} = \frac{27}{2} \sqrt{\frac{4}{7}} \sqrt{\frac{7}{4}}$
